SOLENIX

Overview

Überlog is a web-based logbook solution with user-proven features for efficient creation of log entries, adding context information and searching across multiple logbooks, while ensuring full traceability.

- Complete replacement of paper-based logbooks

- Automatic data injection and export through well-defined interfaces

- Prompt and periodical notifications via email

- Usable on mobile devices

- Easy deployment and administration

Logbook Entries

Entries consists of a message and customisable properties, which include:

- Timestamp
- Severity
- Author
- Group
- Type

Überlog provides:

- Full traceability through revisions and review justifications

- More expressive logs with attachments and collaborative comments

- Reusing templates and prepared sequences

Logbook Organisation

Überlog has multi-logbook capability and the logbooks can be organised in a folder structure matching your organisation.

Monitoring & Analysis

- Browsing per day, by last modification and more

- Searching and filtering across multiple logbooks

- Saving and reusing filters

- Exporting entries into CSV files

- Subscription to RSS feeds and email alerts
