

TRISKEL

OBC+TTC+OSW SOLUTION

TRISKEL is an integral solution for CubeSats command and data handling and communications that integrates the core of any platform, the OBC, TTC and OBSW in one single module.

“Always-on” operation and “no-code” development for standard CubeSat missions. Customizable for high requirements and unique missions.

OBC: On-board Computer
TTC: Telemetry, Tracking, and Command
OBSW: On-board Software

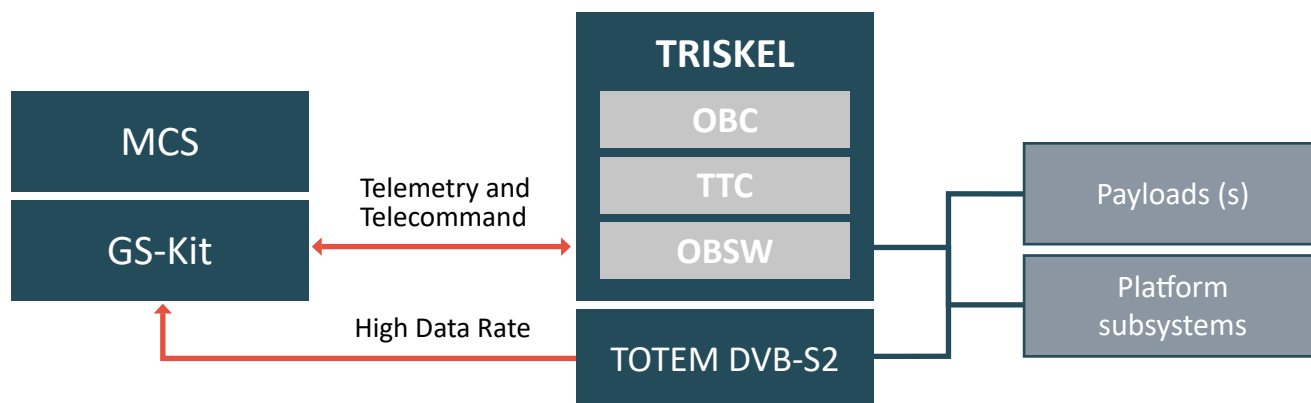

Features

- Platform and subsystem agnostic command and data handling solution based on ECSS/ESA PUS standard.
- Independent Cortex-M7 microcontrollers for the OBC and TTC radio interface.
- Watchdog for single-event upset (SEU) and software error protection.

Characteristics

- PC/104 board with shielding for radiation protection and better thermal stability.
- Operation temperature: -30°C to +85°C
- Integrated temperature and current sensors.

Complete Data Handling Chain

TRISKEL

OBC+TTC+OSW SOLUTION

Integration and Compatibility

- Plug and Play¹
- Interfaces: 2xCAN, 2xI2C, 3xRS422, PPS, 8xGPIO, 8xADC, SPI, 3xPWM
- Umbilical: 2xOBC UART 1xTTC UART

¹Many vendors compatible out of the box
