Overview

The **QubeFlex™** software defined modem has been specifically designed to provide high performance and reliable reception of transmissions from low-earth orbit Cubesat and smallsat devices. Growing commercial applications demand fast time to market and dependable comms.

The **QubeFlex** modem supports CCSDS telemetry, Intelsat and other common space transmission and packet standards. Forward error correction ensures data is protected against transmission loss. High data rates ensure maximum data can be received on each satellite pass.

The **QubeFlex** demodulator will acquire and remain locked to the signal even when faced with the largest Doppler frequency shifts caused by fast-moving low-earth orbit satellites. Demodulator output is formatted for convenient onward computer processing and storage.

In addition to supporting the standard carrier roll-off factors, the **QubeFlex** modem supports larger than normal roll-off factors to allow users to minimise the peak-to-average-power ratio of the generated waveform. This minimises distortion of the transmitted signal and thereby relaxes the design constraints for the smallsat transmission system, which are typically subject to extreme size, weight and power limitations.

The **QubeFlex** modem includes powerful onboard test equipment (spectrum analyzer and a constellation monitor), and is also capable of detecting satellite beacon transmissions, which removes the need for a separate beacon receiver.

## Powerful Onboard Test Equipment

Constellation view: The Rx Constellation Monitor can be used to check for correct modem operation including checking for signal distortion and phase noise. The persistence mode is useful for showing any long-term effects due to phase noise and interference.
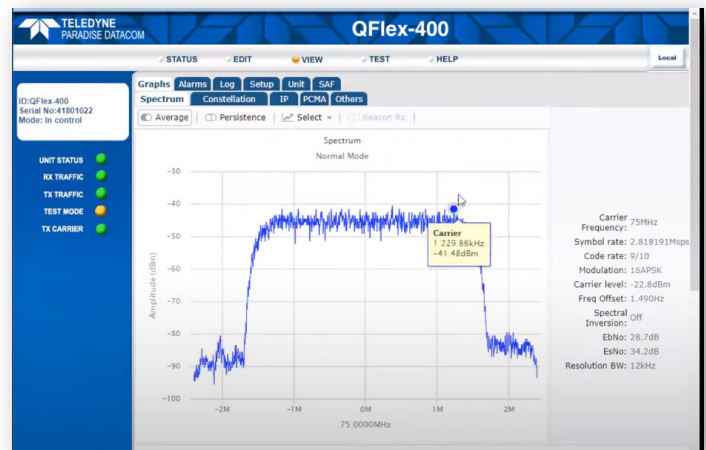

Spectral view: The Rx Spectrum Monitor is a powerful real-time spectrum analyser within the modem that is used to view the received signal spectrum. The monitor can not only display the wanted carrier but a Super Wide view allows checking for adjacent interfering carriers.

LinkGuard™ Interference Detection
